

A Complete Bearing Health Check

by the Bearing Healthcare Professionals

COOPER[®]

Cost Saving Bearing Refurbishment

In addition to being the world leader in split roller bearing technology, Cooper also refurbishes solid and split Cooper bearings into like new condition for a fraction of the cost of a new bearing.

Cooper will assess the bearing condition and provide a full recommendation and pricing prior to carrying out any reconditioning work.

Our US based facility offers:

- Full quality assurance facility for detailed inspection of components.
- Paint removal from all castings.
- A spray booth capable of accepting large bore bearings.
- A surface buffing center for polishing critical and non-critical bearing surfaces.

This Cooper 01C408GR is typical of many of the bearings Cooper receives for refurbishment. A full assessment is carried out before work is started.

The Cooper Rework Service covers all types of bearings originally manufactured by Cooper. The end result is a good match for a newly manufactured bearing.
