

# MAKING BEARING CONVERSIONS EASY WITH THE COOPER SNQ PEDESTAL

Visit [CooperBearings.com](http://CooperBearings.com)

Cooper split bearing solutions have a long-standing reputation amongst maintenance professionals for the immense savings in downtime and ease of fitting.

Launched by Cooper and available for many years as a “bespoke” solution, the ANGLED PEDESTAL is now available across the standard range of SN and SD equivalent pedestal housings.

With the SNQ angled pedestal, Cooper bearing units are now even easier to fit as the angled joint allows the pedestal to be slid under the shaft without the need to raise this with a hoist or jack.

CONVERSIONS EASY WITH**

# **COOPER 'COMPATIBLE' PEDESTALS**

Visit **CooperBearings.com**

**Cooper SNC500, SDC3100  
and SAF500 Series pedestals  
are designed for use where  
interchangeability with SN500,  
SD3100 and SAF500 series  
plummer block units is required.**

The design builds on the Cooper concept  
of quick, easy and safe assembly and  
eliminates any impediment to conversion.

The combination of:

- same base to centre heights
- distance between bolt holes
- angled pedestal

means changing from a problematic  
non-split spherical roller bearing and  
plummer block assembly is simplicity itself.
